Read these instruction manual before using the appliance and keep it available at all times!

This instruction manual contains information about installation, operation and maintenance of the appliance and constitutes an important source of information and reference guide. The knowledge of all operational and safety instructions included in this manual is a prerequisite for safe and proper handling of the appliance.

Read this instruction manual before you use the appliance and particularly before you start the appliance to prevent injury or damage. Incorrect use may cause damage.

All important information contained in the operating instructions must be available to the appropriate staff at all time. The operator shall be responsible for their availability.

In addition to the operating instructions, you must comply with the general, legal and other applicable regulations for occupational safety and environmental protection.

EN

1 Safety

This appliance has been manufactured in accordance with technical standards currently in force. However, the appliance may be a source of hazards if used improperly or contrary to its intended purpose. All persons using the appliance must consider information included in this instruction manual and observe safety instructions.

1.1 Explanation of Signal Words

Important safety instructions and warning information are indicated in this instruction manual with appropriate signal words. You must strictly follow the instructions, to prevent accidents, personal injuries and property damages.

DANGER!

The signal word **DANGER** warns against hazards that lead to severe injuries or death if the hazards are not avoided.

WARNING!

The signal word **WARNING** warns against hazards that may lead to moderate or severe injuries or death if the hazards are not avoided.

CAUTION!

The signal word **CAUTION** warns against hazards that may lead to light or moderate injuries if the hazards are not avoided.

IMPORTANT!

The signal word **IMPORTANT** indicates possible property damages, which may occur if safety instructions are not observed.

NOTE!

The symbol **NOTE** indicates subsequent information and guidelines for the user on usage of the appliance.

EN

1.2 Safety instructions

Electrical Current

- Too high a mains voltage or incorrect installation may cause electric shock.
- The appliance may be connected only if data on the rating plate correspond with the mains voltage.
- To avoid short-circuit, the appliance should be kept dry.
- Ensure that no liquids come into contact with the device's connectors or the mains plug. Moisture can lead to electrical hazards or damage to the device.
- Always disconnect the device from the mains supply before carrying out any installation or dismantling work, cleaning, maintenance, or if the device is not going to be used for an extended period. To do this, pull the mains plug fully out of the socket.
- If there are malfunctions during operation, disconnect the appliance from the power supply.
- Do not touch the appliance's plug with wet hands.
- Never take hold of the appliance if it has fallen into water. Immediately disconnect the appliance from the power supply.

- Any repairs or housing opening may be carried out by professionals and relevant workshops only.
- Do not transport the appliance, holding it by the power cord.
- Do not allow the power cord to come into contact with heat sources or sharp edges.
- Do not bend, pinch nor knot the power cord.
- Always completely unwind the power cord.
- Never place the appliance or other objects on the power cord.
- Always take hold of the plug to disconnect the appliance from the power supply.
- Check the power cord regularly for damage. Do not use the appliance if the power cord is damaged. If this cable is damaged, it must be replaced by customer service or a qualified electrician in order to avoid dangers.

Flammable Materials

- Never subject the appliance to contact with high temperature sources, e.g.: oven, furnace, open flame, heat generating devices, etc.
- To avoid fire hazard, clean the appliance regularly.
- Do not cover the appliance with, e.g., aluminium foil or cloths.
- Use the appliance only with materials designated to this end and with correct temperature settings. Materials, groceries and left-overs remaining in the appliance may catch fire.
- Never use the appliance near flammable or inflammable materials, e.g.: petrol, spirit, alcohol, etc. High temperature triggers evaporation of these materials, and, as a result of contact with sources of ignition, an explosion may occur.
- In case of fire, disconnect the appliance from the power supply before attempting suitable fire-extinguishing actions.
- Never attempt to extinguish fire with water if the appliance is connected to the power supply. Following extinction of fire, ensure sufficient fresh air inflow.

Safety of Induction Plate Operation

- During operation, the heating area is getting very hot.
Information: Induction cooker does not generate heat in the process of cooking. Nevertheless, the temperature of cookware heats up the heating area and the surface remains hot after use. Do not touch any hot surfaces of the appliance.
- You may transport and clean the appliance after it cools down entirely.
- It is prohibited to sprinkle hot surfaces with cold water or flammable liquids.

Safety

- Do not put metal kitchen utensils, lids, knives nor any other metal objects on the heating area. These objects might heat up after switching the appliance on.
- Remember that wearable items, e.g. rings, watches etc., may heat up when they are close to the cooker's plate.
- In order to avoid overheating, do not place any aluminium foil or metal plates on the heating surface of the appliance.
- Do not heat up sealed containers, e.g. canned food, on the heating area of the induction cooker. Resulting overpressure may cause explosion (rupture) of a container or a can. The canned food is best to open it, put it in a pot filled with water and place the pot on a heating area in order to heat it up.
- The heating area is made of a temperature-resistant glass. In case of damage, even if it is only a small fracture, the device should be immediately disconnected from the power supply and you should contact the service company.

Electromagnetic Fields

- Magnetized items, e.g. credit cards, data storage devices or calculators, may not be placed in an immediate vicinity of the switched on appliance. Magnetic field might damage them.
- Do not open the bottom cover!
- Cookware should always be placed in the middle of the cooking area, so that pot bottom covered the electromagnetic field to the maximum extent.
- Scientific researches proved that induction cookers pose no threat. Nevertheless, people with cardiac pacemaker should keep a distance of at least 60 cm from the working appliance.

EN

Supervised Usage only

- Only supervised appliance may be used.
- Always remain in an immediate vicinity of the appliance.

Operating personnel

- This appliance is not intended to be used by persons (including children) with limited physical, sensory or mental capabilities, nor by persons with limited experience and/or limited knowledge.
- Children should be supervised to ensure that they are not playing with or switching the appliance on.

Improper Use

- Unintended or prohibited use may cause damage to the appliance.
- The appliance may only be used when its technical condition is flawless and allows for safe operation.
- The appliance may only be used when all connections are executed according to rules of law in force.
- The appliance may only be used when it is clean.
- Use only original spare parts. Never attempt to repair the appliance on your own.
- Do not introduce any changes in the appliance nor modify it.

1.3 Intended Use

This appliance is only intended for use described in the operating instructions, with the supplied and approved components.

Any other use is considered against the intended purpose. The manufacturer shall not be liable for any damage due to unintended use. In such cases the responsible party shall only be the user/operator.

The following is an intended purpose:

- Preparing and heating-up foods with the use of suitable cookware.

1.4 Unintended Use

An unintended use may lead to personal injuries or property damages caused by hazardous voltage, fire or high temperature. The appliance may only be used to perform tasks described in this instruction manual.

The following is an unintended use:

- Heating of rooms.
- Heating-up flammable, hazardous to health and volatile, etc. liquids and materials.

2 General information

2.1 Liability and Warranty

The appliance was built in accordance with the current state of the art and recognized technical safety principles. Nevertheless, during its use, there may be a threat to the health and life of the user or bystanders, or the danger of damage to the device or other assets. Warranty and liability claims for personal injury/property damage as well as defects at work are excluded if they can be attributed to one or more of the following causes:

- Use against the intended purpose
- Failure to follow/disregard the instructions and all related information
- Unauthorized structural or technical changes to the device
- Engaging insufficiently trained and insufficiently qualified personnel
- Operation with defective or incorrectly installed safety and protective devices
- Inadequate maintenance or cleaning
- Faults not fixed
- Use of prohibited media, cleaning agents, etc.
- Use of unauthorised spare parts
- Errors in operation or other misuse
- Disasters caused by foreign objects or force majeure
- Destruction of the type plate and stickers relevant for operation and safety

EN

2.2 Copyright Protection

This instruction manual, and texts, drawings and images included in it, as well as its other components are copyright protected. It is prohibited to reproduce this instruction manual (including its excerpts), in any form and by any means, and to use and/or transfer its content to third parties without manufacturer's written permission. Violation of the above results in obligation to pay compensation. We reserve the right to claim further damages.

2.3 Declaration of Conformity

The appliance meets the currently applicable standards and guidelines of the European Union. We confirm the above in the EC Declaration of Conformity. We may provide relevant Declaration of Conformity upon request.

3 Transport, Packaging and Storage

3.1 Delivery Check

Immediately upon reception, check the delivery for completeness and possible shipping damage. In the case of visible transport damage refuse to accept the appliance or accept it conditionally. Mark and note the scope of damage in shipping documents/consignment list of the shipping company and lodge a complaint. Concealed damage must be reported immediately upon its discovery, as compensation claims may only be filed within applicable time limits.

If you find that parts or accessories missing, please contact our Customer Service Department.

3.2 Packaging

Do not dispose of the appliance cardboard box. It may be used to store the appliance when relocating or when shipping the appliance to our service point in the case of any damages.

The packaging and its elements are made of recyclable materials. Particularly, these are: plastic films and bags, cardboard box.

When disposing of the packaging, observe applicable domestic regulations. Recyclable packaging materials should be recycled.

3.3 Storage

Leave the packaging closed until installation of the appliance; observe external indications concerning method of placing and storage. Store the packaging in the following conditions only:

- in closed rooms;
- in dry and dust-free surrounding;
- away from aggressive agents;
- in a location protected against sunlight;
- in a location protected against mechanical shocks.

In the case of extended storage (over three months), make sure you check the condition of the packaging and the parts regularly. If needed, replace the packaging with a new one.

4 Technical Data

4.1 Technical Specifications

Name:	Induction cooker IK 70dpZ-EB
Art. No.:	105893
Material:	stainless steel
Heating plate material:	ceramic glass
Number of hobs:	2
Glass hob dimensions (W x D), in mm:	645 x 315
Left-hand side hob max. diameter, in mm:	235
Right-hand side hob max. diameter, in mm:	235
Left hob power output:	3500 W
Left hob max. power output in the case of power output increase:	5000 W
Right hob power output:	3500 W
Right hob max. power output in the case of left hob power output increase:	2000 W
Number of power output levels, at the left/right:	11 / 10
Temperature range, min.–max., in °C:	60 - 240
Number of temperature levels:	10
Temperature setting intervals, in °C:	20
Load capacity per hob in kg:	30
Connected load:	7 kW 400 V 50/60 Hz
Dimensions (W x D x H), in mm:	715 x 485 x 140
Weight, in kg:	14,8

We reserve the right to implement technical modifications.

Version / Characteristics

- Equipment connection: 3 NAC
- Type of hobs: induction
- Arrangement of hobs: side-by-side
- Control: electronic, rotary adjustment knob, touch
- Regulation of:
 - power output
 - temperature
- Cookware detection
- Digital display
- Overheating protection
- Indicator lights:
 - power output
 - temperature
 - cookware detection
- Features: separate control panel, cord length: 0.85 m

4.2 Functions of the Appliance

The induction cooker with removable control panel may be used both as a table-top appliance and as an appliance mounted at a buffet. The power of 7,000 W may be freely distributed between the two cooking fields as required — for fast cooking or heavy browning, the left hob can reach the power output of up to 5,000 W.

4.3 List of Components of the Appliance

Fig. 1

- | | |
|---|----------------------------|
| 1. Left hob | 2. Right hob |
| 3. Glass heating plate | 4. Housing |
| 5. Feet (5 pcs) | 6. Control unit fixing |
| 7. Cable connecting the appliance and the separate control unit | 8. Control unit connection |
| 9. Control unit | |

5 Installation and operation

5.1 Installation

Unpacking / Positioning

- Unpack the appliance, remove all external and internal packaging elements and shipment safeguards.

CAUTION!

Choking hazard!

Prevent children from accessing packaging materials, for instance: plastic bags and EPS elements.

- If the appliance is covered with a protective film, remove it. Remove the film slowly, so no glue residues are left. Remove any glue residues with the use of a suitable solvent.
- Be careful not to damage the rating plate and warning labels affixed to the appliance.
- **Never** place the appliance in humid or wet environment.
- Place the appliance in a way making the connections easily accessible, so that they may be quickly disconnected if such a need arises.
- When selecting the installation site, please consider the following items:
 - The mounting surface must be even, sufficiently load-bearing, waterproof, dry and resistant to high temperatures.
 - Make sure that the designated escape routes are clear.
 - Ensure a stable position.
 - Allow sufficient space for work, maintenance and cleaning.
 - Leave the supply and exhaust air vents, if any, free.
 - Comply with applicable technical and building regulations.
- Maintain sufficient clearance from table edges. The appliance might turn over and fall down.
- Do not place the appliance in the vicinity of devices or objects that are sensitive to magnetic fields (e.g. radio, television, etc.).
- Leave at least 5 -10 cm clearance from flammable walls and other objects.

Appliance Flush Mounting

The induction cooker may be used as a table-top appliance or be flush-mounted in a work top / cabinet.

Control Unit Removal

If the appliance is to be flush-mounted, it is necessary to remove the control unit off of it.

1. Rotate the induction cooker to its side, to remove the control unit.
2. Undo both fixing screws that are used to connect the control unit with the bottom of the appliance.
3. Remove the control unit from the appliance.
4. The control unit is connected with the induction cooker via a cable. To disconnect the connection cable from the appliance, undo both knurled screws and remove the plug.

Appliance Flush Mounting Instructions

1. For installation, select a work top board that is heat resistant to avoid deformation due to the heat radiation of the appliance.
2. Remember that the work top board may not be thicker than 50 mm.
3. The cut-out for installing the unit must have the following dimensions: 670 mm long and 340 mm wide (Fig. 2).
4. Mark out the required cut-out at the chosen location, leaving a gap of at least 100 mm on each side of the unit on the worktop.
5. Cut out the marked area from the worktop.

Fig. 2

EN

6. In order to fit the induction cooker in this recess, first remove the control unit from the appliance. Observe indication in section '**Appliance Flush Mounting / Control Unit Removal**'.
7. For the appliance to function correctly, provide for sufficient ventilation around the appliance.
8. Make sure that ventilation openings of the appliance are not obstructed.

NOTE!

A safe clearance between the heating area and a cupboard above the appliance should be at least 760 mm if no extractor hood is provided for.

ATTENTION!

There has to be at least a 250 mm clearance below the flush-mounted appliance.

If the induction cooker is to be flush-mounted in a cupboard, it is necessary to provide ventilation openings (Fig. 2).

The temperature inside the cupboard may not exceed 32°C.

9. After inserting the cooker in the recess, the edge of the appliance will be 12.75 mm over the surface of the work top.
10. The flush-mounted induction cooker must be sealed with a suitable, 100% rubber silicon sealer.

Control Unit Flush Mounting

Fig. 3

1. The cut-out for the control unit should be 348 mm long and 113 mm wide (Fig. 3).
2. Position the control unit as centrally as possible in relation to the hobs.

Installation and operation

3. Mark the required cut-out on the vertical surface of a cabinet.
4. Cut out the marked surface in the selected location.
5. Insert the control unit in the recess.
6. Fix the control unit with the enclosed support.
7. To end with, connect the induction cooker with the control unit, using the connection cable.

Alternatively, you may flush mount the appliance and control unit in the work top, as indicated in the figure below. Observe flush mounting instructions from previous sections.

Fig. 4

EN

Connection — Electrical Power

- Verify if the technical specification of the appliance (see the rating plate) correspond to the local electricity grid.
- Electrical connection of the appliance to mains power supply must be executed by a qualified electrician, according to international, national and local regulations in force.
- The induction cooker is equipped with power cord. It must be connected with a plug or directly into a suitable mains wall socket.
- Do not use the appliance with an external timer or remote control.

5.2 Operation

Method of operation of heating plates

In induction cookers the electric voltage is applied to a conductive coil under the glass. This generates magnetic field, which being a physical effect, heats the bottom of a cookware directly.

This translates to savings of time and energy, as — contradictory to traditional heating areas — there is no heating up of a heater and then of the glass heating plate.

Another advantage of the technical features described above is the very short cooking time.

Additionally, inflow of heat changes instantly with every change of settings and it may be controlled precisely. The induction heating plate reacts to changes in settings as fast a gas cooker, for the energy is delivered immediately to a pot, without the need to prior heating up of other materials.

The induction technology combines the speed of reaction with a basic benefit of the current, making it possible to precisely control heat inflow.

Suitable Cookware

EN

- Iron cookware
- Enamelled iron cookware
- Steel or enamelled cast iron pots/pans
- Cast iron pots/pans
- Cookware made of 18/0 stainless steel and aluminium if marked as suitable for induction (mind the description of the cookware)

Due to a specific way the induction plate operates, only cookware with a bottom subject to magnetization is suitable.

To obtain better results, use only pans/pots with a diameter of 12–26 cm.

Installation and operation

Example:

Induction cooker cookware, Bartscher 9-piece set of cookware

Chrome-nickel steel, anti-drip edges, non-heating handles

4 pots with lids

2.0 litre, 16 cm diameter, H 10.0 cm

2.7 litre, 18 cm diameter, H 11.0 cm

5.1 litre, 24 cm diameter, H 11.5 cm

6.1 litre, 20 cm diameter, H 20.0 cm

1 pan

2.8 litre, 24 cm diameter, H 6.5 cm

Art. No.: A130442

Not Suitable Cookware

- Containers with bulged bottoms
- Aluminium, brass, copper cookware unless they are clearly indicated as suitable for induction
- Pots/pans with a diameter below 12 cm
- Cookware with feet
- Ceramic cookware
- Glass cookware

EN

Before Use

1. Before use, clean the appliance, observing instructions in section **6 'Cleaning'**.
2. Dry the appliance thoroughly.
3. Place appropriate cookware with food in the middle of the selected hob.

Control Elements / Indicator Lights

Fig. 5

EN

- | | |
|---|--|
| 1. Left hob rotary adjustment knob | 2. Power output and temperature LED control lights of the left hob |
| 3. Left hob digital display | 4. Right hob digital display |
| 5. Power output and temperature LED control lights of the right hob | 6. Right hob rotary adjustment knob |
| 7. OFF position of the right hob rotary controller | 8. Right hob power output / temperature function selection key |
| 9. Left hob power output / temperature function selection key | 10. OFF position of the left hob rotary controller |

Appliance Start-Up

- Before starting the induction cooker, both rotary controllers must be set to OFF position .
- In order to switch the appliance on, rotate the rotary controller for the selected hob clockwise, until you hear a 'click' sound.

The appliance switches to power output mode and the digital display shows the pre-set power output.

The power output LED indicator light lights up.

Settings

Power Output

1. Set the required power output using the rotary controller.
2. Rotate the rotary controller clockwise to increase the power output and counter-clockwise - to decrease the power output.

for the **left hob** in the range of 1–11 (800 W, 1,800 W, 2,000 W, 2,200 W, 2,400 W, 2,600 W, 2,800 W, 3,000 W, 3,200 W, 3,500 W, 5,000 W)

for the **right hob** in the range of 1–10 (800 W, 1,800 W, 2,000 W, 2,200 W, 2,400 W, 2,600 W, 2,800 W, 3,000 W, 3,200 W, 3,500 W)

In the corresponding digital display the set power output is shown.

Power output division is so set that both hobs can be powered up to 3,500 W.

To use the maximum, 7,000 W power output of the appliance, both hobs should be in use. Then, it is possible to use the left hob with the power of 5,000 W, and the right hob with the power of 2,000 W. When the output level of the left hob is set to 5,000 W, the right hob will automatically switch to 2,000 W.

The set power output is always displayed in the corresponding digital display of the control unit:

EN

Temperature

1. Press the function selection key for the selected hob and move from the power output mode to the temperature mode.

The appliance moves the pre-set temperature that is shown on the digital display of the corresponding hob.

The temperature LED indicator light lights up.

2. Using the rotary controller, set the required temperature for the selected hob.
3. Rotate the rotary controller clockwise to increase the temperature and counter-clockwise - to decrease the temperature.

The following temperature settings are available for both hobs:

60, 80, 100, 120, 140, 160, 180, 200, 220 and 240°C.

NOTE!

Any time during the operation, you may switch between the power output mode and temperature mode by pressing the function selection key for the corresponding hob and selecting the desired mode, power output or temperature, using the rotary controller.

Switching the Appliance Off

1. When the food is prepared, switch both rotary controllers off and set them in OFF  position to switch the appliance off.

When the appliance has been switched off, the fan continues to work for approx. 1 minute to cool down the appliance and protect it against overheating.

NOTE:

If there are no new settings introduced during operation, the appliance will switch off automatically after 2 hours.

EN

Overheating Protection

The appliance is equipped with the overheating protection. When the critical temperature is exceeded, the appliance will switch off for safety reasons.

ATTENTION!

Heating up an empty pan or frying pan activates the overheating protection system; a acoustic signal will sound and the appliance will switch off.

The digital display shows 'E2'.

Never place empty cookware on the hob.

When overheating protection is activated, remove cookware from the hob and leave the appliance for a few minutes to cool down.

Then, you may start using the appliance again.

6 Cleaning

6.1 Safety Instructions for Cleaning

- Before cleaning, disconnect the appliance from the power supply.
- Leave the appliance to cool down completely.
- Make sure water does not enter the appliance. Do not immerse the appliance in water or other liquids during cleaning. Do not clean the appliance with a pressurized water jet.
- Do not use any sharp or pointed, nor metal implements (knife, fork, etc.). Sharp or pointed implements may damage the appliance, and when in contact with live parts, they may cause electric shock.
- For cleaning, do not use any scouring agents that contain solvents nor corrosive cleaning agents. They may damage the surface.

6.2 Cleaning

1. Clean the appliance regularly after end of each working day, or more frequently if needed.
2. The heating surface, housing and separate control unit should be cleaned with a soft, damp cloth and a mild, non-scouring cleaning agent.
3. Then, dry the cleaned surfaces thoroughly using a soft cloth.
4. Ventilation openings at the back and bottom of the appliance should not be obstructed with dirt nor dust. Clean them with a brush or vacuum cleaner.

EN

7 Possible Malfunctions

The table below contains descriptions of possible causes and solutions to malfunctions or errors during operation of the appliance. The works may only be performed by suitably qualified technical personnel.

When malfunction cannot be removed, contact the technical service. In such a case, provide article number, model and serial number. You will find this information on the rating plate.

Error Code	Cause	Solution
E0	No cookware on the hob or inappropriate cookware	Use only suitable cookware
E1	Appliance is getting too hot (e.g., due to obstructed ventilation openings)	Open the passage through ventilation openings. Leave the appliance to cool down and restart. If the error code is still shown in the digital display, contact the service company
	A damaged element (e.g., a transistor)	Contact the service company
E2	The overheating protection has been activated and the appliance will switch off	Disconnect the appliance from mains power supply. Remove cookware from the hob. Leave the appliance to cool down, and re-start
E3	Short-lasting power cut	Disconnect the appliance from mains power supply. After a few minutes, plug the appliance in again. Have an electrician check the electrical connection

EN

8 Disposal

Electrical Appliance

	Electric appliances are marked with this symbol. Electrical appliances must be disposed of and recycled in a correct and environmentally friendly manner. You must not dispose of electric appliances with household waste. Disconnect the appliance from the power supply and remove power cord from the appliance.
--	---

Electrical appliances should be returned to designated collection points.
